

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	6 th March 2026
Team ID	
Project Name	Heart Disease Analysis
Maximum Marks	4 Marks

Step-1: Team Gathering, Collaboration and Select the Problem Statement

 Brainstorm & idea prioritization Team Gathering: <u>TeamLead</u> ○ Anuja Mandal <u>Member</u> ○ Priyadeb Barman ○ Pallavi Kumari	The team conducted a brainstorming session to identify a real-world problem that can be solved using data visualization and analytics tools. All members participated in discussing healthcare-related problems that affect a large number of people and require better data-driven solutions. Several topics were initially considered, such as: • Diabetes prediction • Hospital resource management • COVID-19 data analysis • Heart disease risk analysis After discussion and evaluation, the team selected Heart Disease Analysis as the final project topic because heart disease remains one of the leading causes of death worldwide, and analyzing patient data can help identify risk factors and support preventive healthcare. The final problem statement is framed	Problem Statement: How might we use data visualization and analytics to identify key lifestyle and health factors that contribute to heart disease, and present these insights through interactive dashboards for doctors, policymakers, and individuals?
---	--	--

Step-2: Brainstorm, Idea Listing and Grouping

Brainstorm

During the brainstorming phase, the team generated multiple ideas related to heart disease analysis and grouped them into categories.

Generated Ideas

Anuja Mandal

Analyze relationship between **BMI** and heart disease

Study **smoking** habits and cardiovascular risk

Examine **alcohol** consumption and heart problems

Study the role of **other diseases** such as asthma, kidney disease, and stroke

Priyadeb Barman

Analyze **physical activity** levels

Study the effect of **sleep** duration on heart health

Identify correlation between **diabetes** and heart disease

Compare **male vs female** heart disease risk

Pallavi Kumari

Analyze **age** group distribution of heart disease

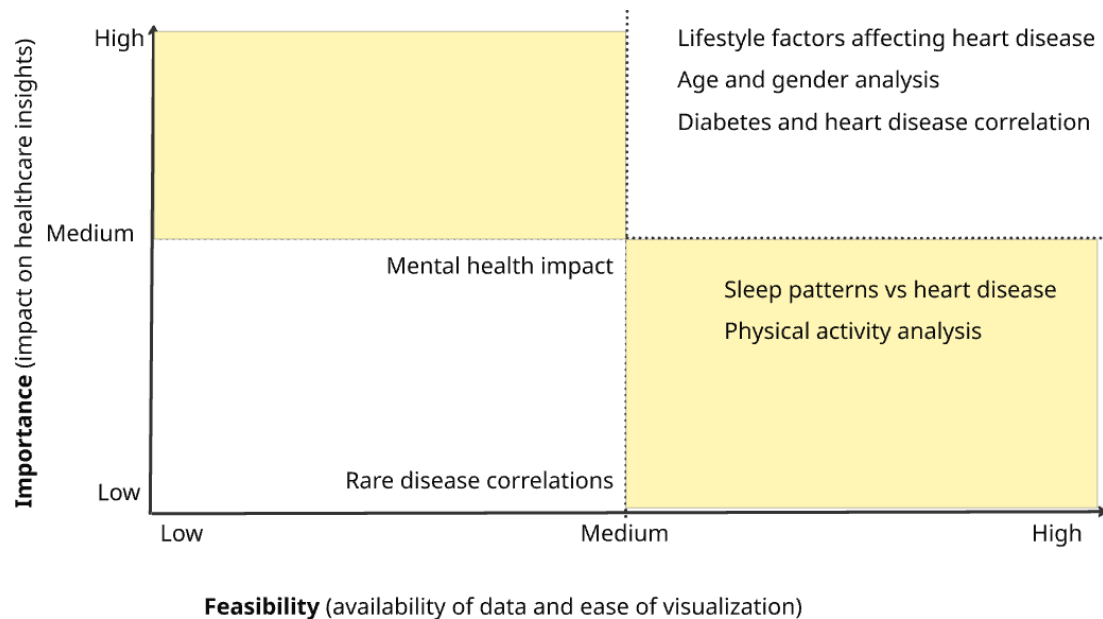

Analyze **mental** health and physical health impact

Grouping of Ideas by Theme

Theme	Ideas
Lifestyle Risk Factors	Smoking, Alcohol consumption, Physical activity
Health Indicators	BMI, Sleep time, Physical health, Mental health
Demographic Analysis	Age category, Gender, Race
Medical Conditions	Diabetes, Stroke, Asthma, Kidney disease
Visualization Insights	Interactive charts, dashboards, trend analysis

These grouped ideas help structure the analysis and guide the development of meaningful visualizations in Tableau.

Step-3: Idea Prioritization

Final Selected Focus Areas

The project will focus on the following key analyses:

1. Lifestyle risk factors affecting heart disease
2. Demographic distribution of heart disease cases
3. Correlation between medical conditions and heart disease
4. Interactive dashboards and visual storytelling using Tableau

These prioritized ideas will guide the **data analysis, visualization design, and dashboard development** with Tableau for the project.
