Customer Problem Statement Template:

This template identifies the core challenges stakeholders face when trying to analyze or monitor heart health data.

Reference: <https://miro.com/templates/customer-problem-statement/>

Example:

I am...	I'm trying to...	But...	Because...	Which makes me feel...
A Healthcare Provider (e.g., Dr. Sharma)	Identify high-risk patient groups and primary lifestyle triggers for heart disease.	It is difficult to extract actionable insights from massive, raw clinical datasets.	Most data is siloed and lacks interactive visual correlations between factors like BMI, smoking, and age.	Overwhelmed by data complexity and unable to target awareness campaigns effectively.
A Policy Maker (e.g., Ramesh)	Develop data-driven preventive health policies for rural and urban populations.	There is a lack of clear, regional trends comparing sedentary lifestyles to disease rates.	Existing reports are static and do not allow for real-time geographic or demographic filtering.	Uninformed when trying to recommend fitness programs or tobacco regulations.

A Health-Conscious Individual (e.g., Anita)	Monitor personal health risks and understand how lifestyle changes impact my heart health.	Standard medical reports are often too technical or lack comparative benchmarks.	I don't have a simplified way to visualize my blood pressure and cholesterol against healthy standards.	Anxious about my family history and uncertain about which specific lifestyle changes to prioritize.
