

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) Who is your customer? CS - Doctors and cardiologists who need to analyze patient risk factors. - Healthcare researchers and analysts studying heart disease trends. - Government health departments creating preventive healthcare policies. - Hospitals and healthcare organizations monitoring patient health data. - Individuals or patients who want to understand their health risks.	6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices. Constraints faced by customers: - Limited technical expertise in data analytics. - Lack of advanced data visualization tools. - Time constraints for doctors to analyze data manually. - Limited access to integrated healthcare analytics systems.	5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper Existing solutions available today: - Manual analysis using spreadsheets (Excel). - Traditional statistical tools. - Generic healthcare reporting systems. - Basic BI dashboards without advanced visualization. Limitations of existing solutions - Difficult to interpret large datasets - Limited visual storytelling	Explore AS, differentia
	2. JOBS-TO-BE-DONE / PROBLEMS JP Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides. - Difficulty in analyzing large healthcare datasets manually. - Lack of clear visualization of heart disease risk factors. - Doctors require quick insights to identify high-risk patients. - Policymakers need data insights to create preventive health strategies. - Individuals lack awareness about lifestyle risks related to heart disease.	9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? What is the back - Healthcare data is large and complex. - Traditional reporting methods cannot easily identify patterns. - Lack of advanced data visualization tools in healthcare systems. - Limited awareness of using business intelligence tools like Tableau for healthcare analytics. story behind the need to do this job? i.e. customers have to do it because of the change in regulations.	7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer, calculate - Doctors manually review patient reports and medical history. - Hospitals analyze reports using spreadsheets. - Health departments rely on static reports and surveys. - Researchers use statistical tools for medical data analysis. usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace)	
Focus on J&P, tap into BE, understand RC		Focus on J&P, tap into BE, understand RC		

3. TRIGGERS TR What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news. Increasing heart disease cases worldwide. Hospitals collecting large amounts of health data. Need for data-driven healthcare decisions. Government initiatives focusing on preventive healthcare. Awareness campaigns highlighting lifestyle-related diseases.	10. YOUR SOLUTION SL If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour. The proposed solution is a Heart Disease Analysis System using Tableau dashboards integrated with a Flask web application.	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7 8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.

4. EMOTIONS: BEFORE / AFTER How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure > confident, in control – use it in your communication strategy & design. Before using the solution ● Confusion in analyzing raw medical data ● Difficulty identifying patterns in heart disease data ● Lack of clarity in decision making After using the solution ● Better understanding of patient health risks ● Clear insights through visual dashboards ● Confidence in healthcare decision making EM	Key features: ● Collect heart disease datasets from healthcare sources. ● Store and manage data using SQL databases. ● Perform data cleaning and preparation. ● Build interactive Tableau dashboards to visualize risk factors such as: ○ Age ○ Cholesterol levels ○ BMI ○ Blood pressure ○ Smoking habits ● Use Tableau Story feature to present insights. ● Embed dashboards into a Flask-based web interface for easy access. This system enables: ● Early detection of high-risk patients ● Data-driven healthcare decisions ● Improved awareness of heart disease risk factors	Online ● Healthcare databases ● Medical research portals ● Data visualization dashboards ● Online healthcare analytics tools Offline ● Hospital patient reports ● Medical conferences and discussions ● Government health department reports
